

Cooling System

# **BG Cooling System Service**

**Removes Scale & Corrosion!  
Protects Heater Core & Water Pump!**

**Ask your Service Advisor  
for a BG Cooling System Service.**

# ***BG Cooling System Service protects the engine from heat and keeps it from freezing on sub zero mornings.***

The cooling system is your engine's only means of releasing the heat that builds to incredible temperatures inside the engine block. Water, mixed with coolant, carries the heat out of your engine to the radiator where it's transferred to the metal fins in the evaporator and blown into the air.

Over time and with temperature extremes, your coolant's protective additives are depleted and begin to break down and become acidic to engine surfaces. This breakdown in coolant conditioners causes corrosion and scale to permeate the system.

BG Cooling System Service dissolves and removes accumulated deposits of scale and sludge. Old, contaminated fluid is replaced with new coolant fortified with BG Universal Super Cool® to protect the metal surfaces inside the radiator and extend the life of the water pump, heater core and hoses.

*Severe corrosion which can occur when additives that protect the cooling system have been depleted.*

*Rust, scale and sludge can plug cooling system fins, preventing proper circulation of coolant.*

BG Cooling System Service should be performed every 30,000 miles/50,000 km to avoid major cooling system problems.

**Ask your Service Advisor for a BG Cooling System Service.**

**Lifetime  
BG Protection Plan**

With a BG Cooling System Service, your vehicle may be eligible for Lifetime BG Protection Plan coverage up to \$4,000. Ask your Service Advisor for details.
