

## BG Drive Line Service

Quieter, Smoother Operation! Protects Expensive Components!

Ask your Service Advisor for a BG Drive Line Service.

## BG Drive Line Service protects critical gear components!

## Manual Transmissions • Front & Rear Differentials Transaxles • Transfer Cases

Severe conditions like heat, moisture, extreme pressure and heavy load place tremendous stress on gear lubricants. This causes thermal breakdown and deposit formation, which contaminate and shorten the life of gear lubricants and drive line components.

A proven cure is the BG Drive Line Service. It uses specialized equipment to remove old, contaminated fluid and debris. The old fluid is replaced with a specially formulated high quality gear lubricant that offers longer operational life than ordinary gear lubricants and keeps critical components clean under extreme temperature and load conditions.

Lubricant breakdown can lead to severely damaged critical gear components!

Heavy

BG Drive Line Service keeps bearings and gears free of varnish and deposits.

BG Drive Line Service should be performed every 30,000 miles/50,000 km to prevent lubricant breakdown and protect critical gear components!

Ask your Service Advisor for a BG Drive Line Service.

With a BG Drive Line Service, your vehicle may be eligible for Lifetime BG Protection Plan coverage up to \$4,000. Ask your Service Advisor for details.
