

PROFESSIONAL STRENGTH

***Restores mileage.
Boosts performance.™***

Cleans fuel-robbing deposits in one professional application, dramatically increasing combustion and horsepower. One can results in a more powerful and fuel efficient engine!

***BG 44K® Fuel System Cleaner
See it at the pump,
feel it on the road!™***

BG 44K[®] Fuel System Cleaner

CLEANS the fuel system and REMOVES deposits!

Deposit buildup on intake valves causes drivability problems such as hesitation, surge and misfire.

BG 44K[®] has always been the superior chemistry for maintaining intake valve cleanliness.

When deposits on the piston crown make contact with deposits on the cylinder head, a knocking noise occurs, loud enough to cause concern.

After one treatment of BG 44K[®] the piston crown is completely cleaned and the squish area is free of deposit interference.

Small, high output engines in modern automobiles are extremely sensitive to deposits that build up in fuel injectors, intake ports, on intake valves and in combustion chambers. Even small amounts of deposits that build up in these areas cause increased exhaust emissions, reduced fuel efficiency, drivability problems and engine knock.

BG 44K[®] restores like-new performance to an engine and keeps it running better, longer and more efficiently.

BG 44K[®] See it at the pump, feel it on the road![™]
